

**Q: How to set up Windows ISA Server**

**A:**

1. Pick any single port to use, preferably larger than 1025. Put this into the port field in *Settings -> General*
2. Enter in your current external IP (can be found [here](#)) into the IP field in DC++.
3. In Microsoft ISA Server, create two rules:

A.

<b>Name:</b>	<i>DC++ (Active PORT)(UDP)</i>
<b>Mode:</b>	<i>Allow</i>
<b>Server:</b>	<i>##My Server name##</i>
<b>Filter Type:</b>	<i>Custom</i>
<b>Protocol:</b>	<i>UDP</i>
<b>Direction:</b>	<i>Both</i>
<b>Local Port:</b>	<i>23343 (same port as DC++)</i>
<b>Remote Port:</b>	<i>All Ports</i>
<b>Local Computer:</b>	<i>Default Ext. Address</i>
<b>Remote Computer:</b>	<i>Any</i>

B.

<b>Name:</b>	<i>DC++ (TCP)</i>
<b>Mode:</b>	<i>Allow</i>
<b>Server:</b>	<i>##My Server name##</i>
<b>Filter Type:</b>	<i>Custom</i>
<b>Protocol:</b>	<i>TCP</i>
<b>Direction:</b>	<i>Both</i>
<b>Local Port:</b>	<i>Dynamic</i>
<b>Remote Port:</b>	<i>Any</i>
<b>Local Computer:</b>	<i>Default Ext. Address</i>
<b>Remote Computer:</b>	<i>Any</i>
