

DC++ : Using DC++ : What's "All download slots taken" and "No slots available"?

Question:

Answer:

No slots available

The user that you are downloading from is already uploading enough, you will need to wait until some of his uploads are finished. How long? There's really no way of knowing.

All download slots taken

You have set a limit in your settings, how many downloads you want to have running at the same time. This setting is found under the download tab in your DC++ settings.
